SurePave™

THE HEAVYWEIGHT IN PERMEABLE PAVING

SurePave permeable paving panels are the ideal solution for reinforcing gravel in highly stressed areas, vehicle parking, driveways, golf courses, parks or hard stand areas for boats, trailers or caravans.

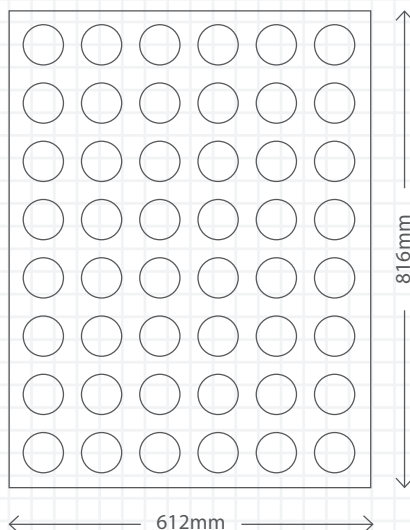

The robust cellular design of SurePave offers a perfect paving alternative to concrete while still maintaining all the benefits of a hard pavement.

Porous and free draining, SurePave allows water to be absorbed easily creating a safe and functional surface that is natural and attractive.

Significant features of SurePave paving panels include a unique positive interlocking system to hold panels in place, a small panel size for ease in transportation and installation, also light and stackable panels for efficient storage.

Wanting a paving solution that encompasses style, functionality and can withstand heavy duty usage? Look no further than the SurePave Paving System.

SUREPAVE TOUGHEST ON THE MARKET IN PERMEABLE PAVING!

SPECIFICATIONS >

- Module Size** 816mm (l) x 612mm (w) x 40mm (h)
- Material** 100% Recycled High Density Polypropylene
- Weight** Approx 4.1 kg/m² unfilled
- Compressive Strength** > 700 tonnes m² when filled (Test method; NZS 3116: 1991, App A & B)
- Colour** Black

SUREPAVE

PRODUCT	SIZE	CODE
SurePave Paver Black	816mm x 612mm x 40mm (0.5m ²)	76148
SurePave Carpark Marker - White		76295

FEATURES >

Super strong 3.5mm wall thickness to handle traffic and turning

Panels interlock securely to reduce long-term creep

Able to withstand **700 tonnes per m²** when filled

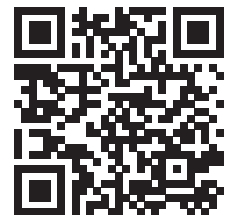

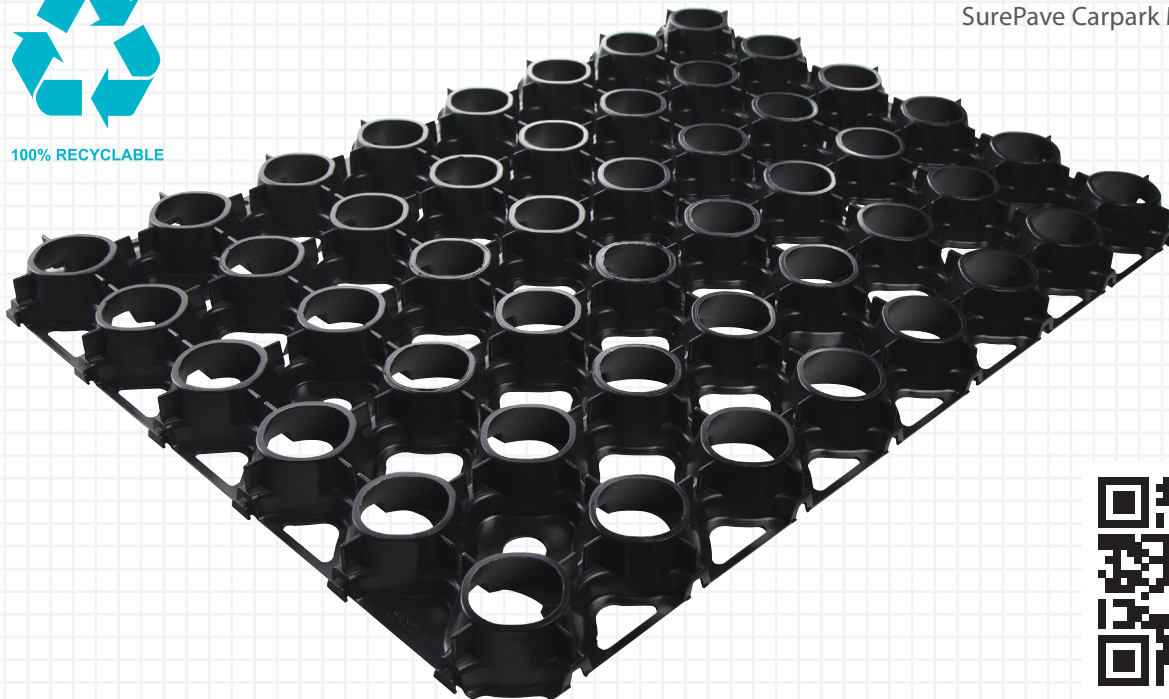

High density polypropylene for permanent strength and durability

SurePave Carpark Marker

100% RECYCLABLE

GrassPave

GRASS STABILISATION SYSTEM

GrassPave is an eco-friendly, economical permeable paving system ideal for grassed pedestrian and overflow parking areas.

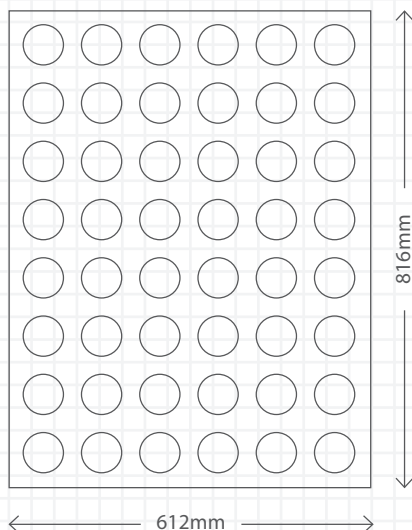

GrassPave is a versatile yet strong method to reinforce your green areas. Most grass pavers made of concrete, tend to heat up causing the grass to dry out and scorch. GrassPave solves this problem.

The unique honeycomb cell structure creates a stable surface to support

turfed areas where pedestrian and occasional vehicle traffic would usually cause problems of ground rutting and soil compaction.

All GrassPave permeable paving panels have a simple interlocking clip system that holds panels together. GrassPave panels are 3% the weight of traditional concrete grass paver alternatives, making installation and transportation considerably easier.

GRASSPAVE THE BEST SOLUTION FOR GRASS STABILISATION!
