SPECIFICATIONS
Mains Voltage: 220–240V ~ 50Hz
Input Power: 2200W
Max. Inlet Pressure: 0.6MPa (87psi)
Permissible Pressure: 16.5MPa (2400psi)
Rated Pressure: 11.0MPa (1600psi)
Flow Rate: 5.8L/min
Max. Flow Rate: 6.8L/min
Water Supply Temp.: 40°C
IP Rating: IPX5
Weight: 10.8kg

IN ORDER TO MAKE A CLAIM UNDER THIS WARRANTY YOU MUST RETURN THE PRODUCT TO YOUR NEAREST BUNNINGS WAREHOUSE WITH YOUR BUNNINGS REGISTER RECEIPT. PRIOR TO RETURNING YOUR PRODUCT FOR WARRANTY PLEASE TELEPHONE OUR CUSTOMER SERVICE HELPLINE:

Australia 1800 069 486
New Zealand 0508 069 486

TO ENSURE A SPEEDY RESPONSE PLEASE HAVE THE MODEL NUMBER AND DATE OF PURCHASE AVAILABLE. A CUSTOMER SERVICE REPRESENTATIVE WILL TAKE YOUR CALL AND ANSWER ANY QUESTIONS YOU MAY HAVE RELATING TO THE WARRANTY POLICY OR PROCEDURE.

The benefits provided under this warranty are in addition to other rights and remedies which are available to you at law. Our goods come with guarantees that cannot be excluded at law. You are entitled to a replacement or refund for a major failure and for compensation for any other reasonably foreseeable loss or damage. You are also entitled to have the goods repaired or replaced if the goods fail to be of acceptable quality and the failure does not amount to a major failure.

Generally you will be responsible for all costs associated with a claim under this warranty, however, where you have suffered any additional direct loss as a result of a defective product you may be able to claim such expenses by contacting our customer service helpline above.

3 YEAR REPLACEMENT WARRANTY
Your product is guaranteed for a period of 36 months from the original date of purchase. If a product is defective it will be replaced in accordance with the terms of this warranty. Warranty excludes consumable parts, for example: valve adapters and accessories.

WARNING
The following actions will result in the warranty being void.

- If the tool has been operated on a supply voltage other than that specified on the tool.
- If the tool shows signs of damage or defects caused by or resulting from abuse, accidents or alterations.
- Failure to perform maintenance as set out within the instruction manual.
- If the tool is disassembled or tampered with in any way.
- Professional, industrial or high frequency use.
1. **Attaching The Handle**

   1. Slide the base of the handle into the tabs on the top of the unit.
   2. Insert the two screws (supplied) through the tabs and into the handle.
   3. Using a phillips head screwdriver, tighten the screws into place.

2. **Attaching The Accessory Holder & Cable Hook**

   1. Slide the accessory holder onto the slots on one side of the unit until it clicks into place.
   2. Slide the cord hook onto the slot on the other side of the unit until it too clicks into place.

3. **Installing The Detergent Bottle**

   1. Insert the nozzle on the base of the detergent bottle into the soap port on the machine.
   2. Push the detergent bottle into the slot on the machine until it clicks into place.
Connecting The Water Supply

This pressure washer requires a pressurised water source with a maximum pressure of 0.6MPa (87psi). It is recommended that a reinforced garden hose (with minimum diameter of 12mm) is used for the inlet connection. It cannot be used with a bucket and siphon.

**WARNING!** RUN WATER THROUGH THE GARDEN HOSE BEFORE ATTACHING IT TO THE PRESSURE WASHER TO PREVENT ANY SAND OR DIRT FROM ENTERING THE UNIT.

1. If it is not already fitted, place the mesh inlet filter into the hose adaptor, and then screw this onto the water inlet port.

   **Note:** The mesh inlet filter must be in place to prevent impurities in the water source from entering the unit and damaging the pump.

2. Push the standard quick coupling adaptor on the end of the garden hose onto the hose adaptor on the pressure washer until it clicks into place.

   **Note:** The standard quick coupling adaptor should have an external diameter of 16mm and an internal diameter of 12mm.

3. Pull gently on the hose to ensure the connection is secure.

Connecting The Pressure Hose

1. Push one end of the 5m pressure hose into the water outlet port on the back of the pressure washer until it clicks into place.

2. Gently tug on the pressure hose to check that the connection is secure.

3. To disconnect the pressure hose, press and hold the quick release button on the water outlet port while pulling the hose out.

Attaching The Spray Gun & Lance

1. Push the tab end of the lance into the spray gun and twist clockwise to lock it into place.

2. Push the end of the pressure hose into the inlet port on the spray gun until it clicks into place.

3. Tug gently on the pressure hose to check that it is inserted correctly.

4. To disconnect the spray gun, press and hold down the quick release tab and pull out the pressure hose.

5. Twist the lance anti-clockwise against the spray gun to detach it.

Attaching The Nozzles

1. Align the tabs on the nozzle to the slots on the front end of the lance.

2. Push the nozzle into the connector end of the lance until it clicks into place.

3. To detach the nozzle, press and hold down the quick release button on the nozzle whilst pulling it off.
### 3. USING DETERGENT

**Warning!** Ensure the tool is turned off and disconnected from the power supply before performing any of the following operations.

**Warning!** Never run bleach or detergents not designed for pressure washers in the unit to prevent damaging the pump.

#### Loading The Soap Dispenser

1. Flip open the lid on the soap bottle.
2. Pour in the required amount of car wash detergent.
3. Dilute the detergent as directed by the detergent manufacturer’s instructions.
4. Replace the lid on the soap bottle.

**Note:** The foam dispenser nozzle must be used in order to discharge soap from the unit. If the adjustable width nozzle is used, only water will be pulled through the system.

#### Changing Detergents

1. Remove any remaining detergent from the soap bottle.
2. With the foam dispenser nozzle attached, continuing spraying until only water is emitted from the nozzle.
3. Fill the soap bottle with the second detergent. Use as normal.

### 3. CONTROLS

**Warning!** The power supply for this product must be protected by a residual current device (rated at 30mA or less).

#### Starting & Stopping The Unit

1. Rotate the on/off dial to the ‘I | ON’ position to turn the unit on.
2. Unlock the spray gun by pushing the trigger lock towards the right side of the gun.
3. Squeeze the spray gun trigger to start spraying.
4. Release the trigger to stop spraying.
5. Rotate the dial to the ‘0 | OFF’ position to turn the unit off.

**Warning!** Do not leave the unit idling in the ‘ON’ position for more than 5 minutes without activating the spray gun. Doing so may damage the pump in the unit.

**Warning!** Ensure the tool is turned off and disconnected from the power supply before performing any of the following operations.

**Warning!** Never run bleach or detergents not designed for pressure washers in the unit to prevent damaging the pump.
Adjusting The Spray Jet

The water jet output can be controlled when using the adjustable spray nozzle.

1. Turn the nozzle clockwise for a narrow jet over a small area for concentrated cleaning.

2. Turn the nozzle anti-clockwise for a wide, fan jet to clean larger areas faster.

Overload Protection

The tool is equipped with an overload protection feature. If an overload occurs, the tool will automatically shut off to protect the tool.

1. In the event of an overload turn the on/off dial to the ‘0 | OFF’ position, allow the tool to cool down completely.

2. Remove the power plug from the mains socket and disconnect the garden hose from the water inlet port.

3. Unscrew the hose adaptor from the water inlet port and inspect the mesh filter for any blockages.

4. Clean the filter as necessary and reinstall it when done.

5. Once the unit has cooled sufficiently, restart the unit and use as normal.

4. PRESSURE WASHING

WARNING! DO NOT CONTINUE USING THE UNIT IF THE OVERLOAD SWITCH TRIPS AGAIN IMMEDIATELY AFTER THE RESET.

WARNING! WHEN INSPECTING EQUIPMENT FOR FAULTS, ENSURE THE UNIT IS SWITCHED OFF AND THE POWER CABLE IS DISCONNECTED BEFORE CARRYING OUT INSPECTION.

Quick Start Procedure

1. With the adjustable spray nozzle attached, adjust it to the widest spray setting.

2. Attach the garden hose to the water inlet port and turn on the water at the tap.

3. Squeeze the spray gun trigger to prime the pump and purge any air from the system.

4. Plug the power cord into mains power.

5. Turn the unit on using the on/off dial to start washing.

WARNING! ENSURE THAT THE SPRAY JET IS NOT DIRECTED AT POWER LINES, ELECTRICAL OUTLETS AND ELECTRONICS.

WARNING! HIGH PRESSURE HOSES, FITTINGS & COUPLINGS ARE IMPORTANT FOR THE SAFETY OF THE USER. USE ONLY HOSES, FITTING & COUPLINGS SUPPLIED.

WARNING! WEAR SAFETY GLASSES WHEN USING THE PRESSURE WASHER TO AVOID FLYING DEBRIS THAT MAY BE DISLODGED DURING CLEANING.

WARNING! ENSURE THE PRESSURE WASHER IS PLACED ON A FLAT, HARD SURFACE. ALWAYS HAVE THE PRESSURE WASHER IN AN UPRIGHT POSITION DURING USE.

WARNING! HIGH PRESSURE HOSES, FITTINGS & COUPLINGS ARE IMPORTANT FOR THE SAFETY OF THE USER. USE ONLY HOSES, FITTING & COUPLINGS SUPPLIED.
Usage Tips

Pressure washers are designed to remove dirt and grime. They are not designed to strip paint or kill mildew from surfaces.

1. Lay tarps around the house perimeter to protect plants from debris and accidental spray.

2. Hold the spray jet at a 45° angle and at a suitable distance to the surface being washed to prevent gouging the surface. Do not hold the spray jet straight on to the surface as this drives dirt in rather than washing it off.

3. Work small areas at a time and use overlapping strokes to prevent streaks.

4. Once finished with the machine, twist the on/off dial to the off position, disconnect the power plug, shut the water supply completely off and squeeze the spray gun trigger several times to release any built up pressure and water in the system.

Washing Your Car

1. With the adjustable spray nozzle attached and on a medium to wide spray setting, loosen and rinse off any dirt.

2. Change to the foam dispenser nozzle and coat your car in a layer of foam. Allow the soap to sit for a few minutes (or as directed by the manufacturer) for it to penetrate any dirt or grime.

3. Swap back to the adjustable spray nozzle and rinse down your car on the wide spray setting.

Note: Keep the car surface wet to prevent any discolouration or damage from the detergent.

5. TROUBLESHOOTING

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Possible Cause</th>
<th>Suggested Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fluctuating pressure</td>
<td>The pump is drawing in air</td>
<td>Check that the connections are securely installed. Check the hoses for kinks and punctures.</td>
</tr>
<tr>
<td></td>
<td>Insufficient water supply</td>
<td>Increase the water supply at the tap, check for blockages or kinks in the hose and/or swap to a larger diameter hose.</td>
</tr>
<tr>
<td>The machine stops mid-use</td>
<td>Incorrect mains voltage</td>
<td>Unplug other appliances. Check that the power supply corresponds to the specifications on the datalabel.</td>
</tr>
<tr>
<td></td>
<td>Overload protection activated</td>
<td>Allow the machine to cool for 5 minutes. Check the filter for blockages.</td>
</tr>
<tr>
<td></td>
<td>Partially blocked water jet</td>
<td>Clean the nozzle with the supplied cleaning needle.</td>
</tr>
<tr>
<td></td>
<td>Pulsing/ inconsistent spray</td>
<td>Pull and hold the spray gun trigger and allow the machine to run until working pressure resumes.</td>
</tr>
<tr>
<td></td>
<td>Inadequate water supply</td>
<td>Increase the water supply at the tap, check for blockages or kinks in the hose and/or swap to a larger diameter hose.</td>
</tr>
<tr>
<td></td>
<td>Partially blocked water jet</td>
<td>Clean the nozzle with the supplied cleaning needle.</td>

</table>
Cleaning

1. We recommend that you clean the tool immediately after you use it.

2. Keep the tool free of dirt and dust as much as possible. Wipe the equipment with a clean cloth.

3. Clean the tool regularly with a cloth. Do not use cleaning agents or solvents; these may be aggressive to the plastic parts in the appliance.

4. You must disconnect the hose and spraying tools from the pressure washer before cleaning. Do not clean the pressure washer with water.

Storage

Pull the mains plug out of the socket, switch off the tool and make sure that it is secured in such a way that it cannot be started up again by any unauthorised person.

The nozzle can be stored on the accessory slots on the back of the unit when not in use. Wind the water hose around the handle hook and the power cord around the cord hook to keep them tidy and out of the way.

Empty the detergent bottle before storing the tool in a dry location which is not accessible to unauthorised persons.

Supply Cords

If replacement of the supply cord is necessary, this has to be done by a certified electrician in order to avoid a safety hazard.

Note: Ozito Industries will not be responsible for any damage or injuries caused by the repair of the tool by an unauthorised person or by mishandling of the tool.

WARNING! BEFORE CLEANING YOUR TOOL OR CARRYING OUT ANY MAINTENANCE PROCEDURE, MAKE SURE THAT IT IS DISCONNECTED FROM THE POWER SUPPLY TO PREVENT ACCIDENTAL STARTING.

WARNING! High pressure jets can be dangerous if not used properly. Do not direct the jet at persons, animals, live electrical equipment or the pressure washer itself.

Power tools that are no longer usable should not be disposed of with household waste but in an environmentally friendly way. Please recycle where facilities exist. Check with your local council authority for recycling advice.

Recycling packaging reduces the need for landfill and raw materials. Reuse of recycled material decreases pollution in the environment. Please recycle packaging where facilities exist. Check with your local council authority for recycling advice.

Spare parts can be ordered from the Special Orders Desk at your local Bunnings Warehouse.

**Electrical Safety**

**WARNING!** When using mains-powered tools, basic safety precautions, including the following, should always be followed to reduce risk of fire, electric shock, personal injury and material damage.

- Read the whole manual carefully and make sure you know how to switch the tool off in an emergency, before operating the tool.
- Save these instructions and other documents supplied with this tool for future reference.
- The charger has been designed for 230V and 240V only. Always check that the power supply corresponds to the voltage on the rating plate.
- **Note:** The supply of 230V and 240V on Ozito tools are interchangeable for Australia and New Zealand.
- This tool’s charger is double insulated; therefore no earth wire is required.
- **Note:** Double insulation does not take the place of normal safety precautions when operating this tool. The insulation system is for added protection against injury resulting from a possible electrical insulation failure within the tool.

**General Power Tool Safety Warnings**

**WARNING!** Read all safety warnings and all instructions. Failure to follow the warnings and instructions may result in electric shock, fire and/or serious injury.

- a. Keep work area clean and well lit. Cluttered or dark areas invite accidents.
- b. Do not operate power tools in explosive atmospheres, such as in the presence of flammable liquids, gases or dust. Power tools create sparks which may ignite the dust or fumes.
- c. Prevent unintentional starting. Ensure the switch is in the off-position before connecting to power supply.
- d. Never abuse the cord. Never use the cord for carrying, pulling or unplugging the power tool. Keep cord away from heat, oil, sharp edges or moving parts. Damaged or entangled cords increase the risk of electric shock.
- e. Never use the tool for anything but its intended purpose.
- f. When operating a power tool outdoors, use an extension cord suitable for outdoor use. Use of a cord suitable for outdoor use reduces the risk of electric shock.
- g. Personal safety.
- a. Stay alert, watch what you are doing and use common sense when operating a power tool. Do not use power tools while you are tired or under the influence of drugs, alcohol or medication. A moment of inattention while operating power tools may result in serious personal injury.
- b. Use personal protective equipment. Always wear eye protection. Protective equipment such as dust mask, non-slip safety shoes, hard hat, or hearing protection used for appropriate conditions will reduce personal injuries.
- c. Prevent unintentional starting. Ensure the switch is in the off-position before connecting to power source and/or batteries, picking up or carrying the tool. Carrying power tools with your finger on the switch or energising power tools that have the switch on invites accidents.
- d. Remove any adjusting key or wrench before turning the power tool on. A wrench or a key left attached to a rotating part of the power tool may result in personal injury.
- e. Do not overreach. Keep proper footing and balance at all times. This enables better control of the power tool in unexpected situations.
- f. Dress properly. Do not wear loose clothing or jewellery. Keep your hair, clothing and gloves away from moving parts. Loose clothes, jewellery or long hair can be caught in moving parts.
- g. If devices are provided for the connection of dust extraction and collection facilities, ensure these are connected and properly used. Use dust collection can reduce dust-related hazards.
- h. Do not let familiarity gained from frequent use of tools allow you to become complacent and ignore tool safety principles. A careless action can cause severe injury within a fraction of a second.
- i. Power tool use and care.
- a. Do not force the power tool. Use the correct power tool for your application. The correct power tool will do the job better and safer at the rate for which it was designed.
- b. Do not use the power tool if the switch does not turn it on or off. Any power tool that cannot be controlled with the switch is dangerous and must be repaired.
- c. Disconnect the plug from the power source and/or the battery pack from the power tool before making any adjustments, changing accessories, or storing power tools. Such preventive safety measures reduce the risk of starting the power tool accidently.
- d. Store idle power tools out of the reach of children and do not allow persons unfamiliar with the power tool or these instructions to operate the power tool. Power tools are dangerous in the hands of untrained users.
- e. Maintain power tools. Check for misalignment or binding of moving parts, breakage of parts and any other condition that may affect the power tool’s operation. If damaged, have the power tool repaired before use. Many accidents are caused by poorly maintained power tools.
- f. Keep cutting tools sharp and clean. Properly maintained cutting tools with sharp cutting edges are less likely to bind and are easier to control.
- g. Use the power tool, accessories and tool bits etc. in accordance with these instructions, taking into account the working conditions and the work to be performed. Use of the power tool for operations different from those intended could result in a hazardous situation.
- h. Handle and store all power tools with care. Power tools can be dangerous in the hands of untrained users.
- i. Never leave power tools running when unattended.
- **Special**
- a. Have your power tool serviced by a qualified repair person using only identical replacement parts. Replacement of parts should be made with parts specified by the manufacturer to ensure the safe operation of the power tool.

**High Pressure Washer Safety Warnings**

**WARNING!** The appliance is not to be used by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction.

- Young children should be supervised to ensure that they do not play with the appliance.

**WARNING!** High pressure injection injuries are considered to be medical emergencies. In the event of a high pressure injection injury occurring, seek medical advice immediately.

**WARNING!** It is prohibited to use Pressure Washers on materials containing asbestos (Cement sheet roofs, Fences, Walls etc.). Large numbers of asbestos fibres may be released into the air, posing a serious health hazard. If unsure about the materials you are spraying, it is recommended that you contact your local council or government authority.

- Before connecting a tool to a power source ( mains switch powder point receptacle, outlet, etc.) be sure that the voltage supply is the same as that specified on the nameplate of the tool. A power source with a voltage greater than that specified for the tool can result in serious injury to the user, as well as damage to the tool. If in doubt, do not plug in the tool. Using a power source with a voltage less than the nameplate rating is harmful to the motor.
- Unsuitable operation of your high pressure cleaner could lead to serious injury or death to the user or others.
- The spray gun/wand is a powerful cleaning tool that could look like a toy to a child.
- Improper control of gun/wand can result in injuries to self, others and property damage. Reactive force from the spray can result in gunflame movement, potentially causing the operator to slip, fall or misdirect the spray.
- Become familiar with the operation and controls of the pressure cleaner.
- Keep children away from the pressure cleaner at all times.
- Never modify or remove the safety features of this product.
- Do not operate the machine with missing, broken or unauthorized parts.
- Never leave wand unattended while unit is running.
- Keep work area free of obstacles.
- Stand on stable surface and grip gun/lance firmly. Expect the gun to kick back when engaged.
- Do not use to pump flammable or explosive liquids such as gasoline, fuel oil, kerosene, solvents or thinners. Pump should only be used with liquids compatible with pressure washer component materials. Failure to follow to this warning can result in serious personal injury, death and/or property damage.
  - Only use cleaning agents designed for pressure washers. The use of other cleaning agents or chemicals may adversely affect the safety and/or operation of the appliance.
  - Do not use the appliance within range of persons unless they are wearing protective clothing.
  - High pressure jets can be dangerous if subject to misuse. The jet must not be directed at persons, animals, live electrical equipment or the appliance itself.
  - Do not direct the jet against yourself or others in order to clean clothes or footwear.
  - To ensure appliance safety, use only original spare parts from the manufacturer or approved by the manufacturer.
  - High pressure hoses, fittings and couplings are important for the safety of the appliance. Use only hoses, fittings and couplings recommended by the manufacturer.
  - High pressure hoses, fittings and couplings are important for the safety of the appliance. Use only hoses, fittings and couplings recommended by the manufacturer.
  - Do not operate the appliance if a supply cord or important parts of the appliance are damaged, e.g. safety valve, high pressure hoses, trigger gun.
  - Water that has flowed through a backflow preventer is considered to be non-potable.
  - Depending on the application, shielded nozzles can be used for high pressure cleaning, which will reduce the emission of hydraulic aerosols dramatically. However, not all applications allow the use of such a device. If shielded nozzles are not applicable for the protection against aerosols, a respiratory mask of class FFP2 or equivalent may be needed, depending on the cleaning environment.
  - The electric supply connection shall be made by a qualified electrician and comply with IEC60364-1. It is recommended that the electric supply to this machine should include either a residual current device that will interrupt the supply if the leakage current to earth exceeds 30mA for 30mA or a device that will prove the earth circuit.
  - Never touch the mains plug or power outlet with wet hands.
  - Always disconnect the product from the power outlet when leaving the machine unattended.
  - This product must not be connected to the potable water mains without backflow prevention. Check local and national plumbing regulations before connecting the machine to the potable water mains.
  - This product must not be connected to the potable water mains without backflow prevention. Check local and national plumbing regulations before connecting the machine to the potable water mains.
  - If an extension cord is used, it shall be suitable for outdoor use, and the connection has to be kept dry and off the ground. It is recommended that this is accomplished by means of a cord reel which keeps the socket at least 60 mm above the ground.
  - If it is required that a reinforced garden hose (with minimum diameter of 12mm) is used for the inlet connection.
